

THE REAL NATURE OF GOD

By Kiril Chukanov, Sofia, Bulgaria, 2016

Copyright© 2017

Does God exist or not? If God exists, what is His nature, powers, and functions in our world? Did He create the universe and can He destroy it? Where in the universe (or outside of it) does He reside? How can He influence or control inanimate and animate matter? And human soul? Can He violate or change the laws in the universe? Is He eternal or mortal? Such kind of questions excite the imagination of reasonable people who are willing to accept the existing of God.

When I try to debate with religious people about the truth of their religion, their ultimate reply is ultimately: "I believe because I believe! God is real but He doesn't reveal His real nature to human beings. The God's ways are out of our understanding." God for religious people is a supreme being who is out of the reach of the human's senses and reason. By definition (Christian religion dogma) God is the creator of the universe and its supreme manager. God is eternal creature who represents the ultimate source of hope, love, and support for human beings.

I have never found anyone (religious or atheist person) who is willing to go beyond these affirmations. No one has attempted to establish (even by thinking) God's nature. Yet the refusal to do so represents a pure primitivism, or fear of the unknown forces of nature, inherited from the past when there was no real science.

A poll of American scientists conducted in 1998 reported that only 5 percent defined themselves as religious. This is a small percentage, probably because it is hard to combine the blind faith and primitivism required by religion in accepting the existing of God with the scientific method, based on observable facts, laws and phenomena of nature. As we'll understand below in this article, God is not directly observable because He resides in the orthogonal (by contrast to our three-dimensional space of individual things **I**) two-dimensional space-continuum " α ". We know, however, that every real (existing) thing in the world can be detected or measured (in principle) by the Alive Observer (in the case – human beings). Like the second quantum image of the inanimate universe, the existing of God can be detected somehow. In this article we'll show how.

Primitivistic thinking and the religious socialization that people receive during their education (by major religious) are not the only causes for the miraculous survival of the

major world religious. Rather, a main cause is the poor quality of contemporary official science, which has thrown both the baby and the bathwater out together. Symbolically, the baby is God, while the bathwater is religious dogmas. Through their inner consciousness (intuition) people feel presence of God in themselves (like all material bodies feel the quantum 2-D image of the universe through gravitation) and cannot accept the absolute absence of God that official science insists upon. Simultaneously, contemporary scientific concepts and existing social capitalistic relations do not offer hope of a better future for ordinary people. For them, and especially for the elderly, God represents not only faith and love, but also hope for better life on Earth and happier eternal existence elsewhere after death.

Are there really only these two alternatives, each with such serious flaws? I have no hesitation in saying that there is a third alternative. General Quantum Mechanics (revealed to me by God Himself) puts the baby back in a bath filled with sparkling clean water. The primitivism of the major world religious prevents drawing correct conclusion of God's nature by interposing superstition, mysticism, and priest-quackery. These flaws will be replaced by clarity, logic, and courage in facing the unknown faces of our world based on new philosophy and new scientific dogmas.

Up to now in all my works on General Quantum Mechanics I have been elaborating on the issue of God mainly in a speculative way without to clarify His real nature. However, if one believes in something, then he has to be sure that this thing exists and that he has clear idea how to prove scientifically its real nature. Thus, the problem of our belief in God can be defined: if we believe in the existence of God, which is absolutely unknown to us, then our belief is nothing but superstition. God has no reason whatsoever to hide His true nature from us. The great German philosopher G. Hegel wrote that to say that God is not willing to reveal His secrets to ordinary people is equal to saying that He is jealous towards them. Actually by sharing His secrets with people God is not losing anything. He is like a burning candle which can light another candles without losing any part or quality of its flame.

Contemporary official science claims that there is no need for God in our world. Everything has its natural origin and cause of existing. The universe was born as a result of the Great Explosion (Big Bang) of the primordial super-condensed material seed and evolves according the rules of behavior of inanimate matter, or natural laws created randomly during the Big Bang. Some more cautious contemporary scientists are willing to admit the existing of Universal Super-Mind who has dealings only with the human consciousness (soul) but who is not the creator and manager of the whole material world. Or God who controls some extremal structural levels of matter which are inaccessible in principle for humankind. So, again nothing about God's real nature.

To understand the nature of the *Super-Mind of the Universe (God in religion)* we must first understand symmetries existing between all six variants of *Reality*.

From the previous my publications of General Quantum Mechanics (GQM), and, especially from volume VI, we know that *Reality* is the basic philosophical category in the

construction and behavior of our world-universe. *Reality* includes (or, is composed by) three sub-categories: *inanimate matter*, *animate matter*, and *spirit*. Everyone of them has two variants (see further). *Reality* exists in the frame of “space-time”. Some scientists say: “Space is a geometrical (not necessary material substance) receptacle of a material objects. Matter is the only real thing in the world.” Conventional scientists ignore (more precisely they don’t know its fundamental role) ‘human consciousness’ (the human soul) as independent, basic, philosophical category – equal in importance to the category ‘matter’. They wrongly consider ‘human consciousness’ as secondary (derivate) to the basic category ‘matter’ – just function of the material brains.

An important question arises: Is the space a kind of material substance or just geometry? In his General Relativity A. Einstein doesn’t explain this very important for physical science issue. Space could be pure geometry, could be some unknown form of material substance, it doesn’t affect his ‘great theory’. But that means that the ‘greatest physicist of all times’ had no idea about the real nature of gravitation. His mathematical formulae don’t explain why material bodies attract each other, they just calculate the value of some gravitational interactions between bodies with mass in rest. Einstein’s ‘great mathematical theory’ is based on some obvious postulate which is obvious because we see it to work, but we don’t know why it works. Even though A. Einstein complained of too much mathematics in General Theory of Relativity. He wrote: “I stopped to understand my theory of gravitation when mathematicians rebuilt this theory in mathematical terms”. The truth is: A. Einstein is a false ‘scientific’ god created by very aggressive propaganda, mostly by Jews who are controlling (rich Jews, Zionists more precisely) the U.S.A. and the world with their robbed from the whole world money.

Logically, the space must be material substance because we perceive it with the help of our material senses, and, because it is impossible to curve (deform) something which is not material substance. Material bodies cannot curve something which is imaginable, geometrical. One thing is imaginable constructions created by mathematics, another thing is the real physical world.

In my GQM I explained that the space represents “electron matter continuum” which is “open to the inside”, while the “proton matter” bodies are “open to the outside” (see GQM II). All “proton matter” bodies exist in the “electron matter” material continuum-space and are separated each from another by this material continuum. Below is shown the most basic theoretical scheme of our world-universe. See Figure 1.

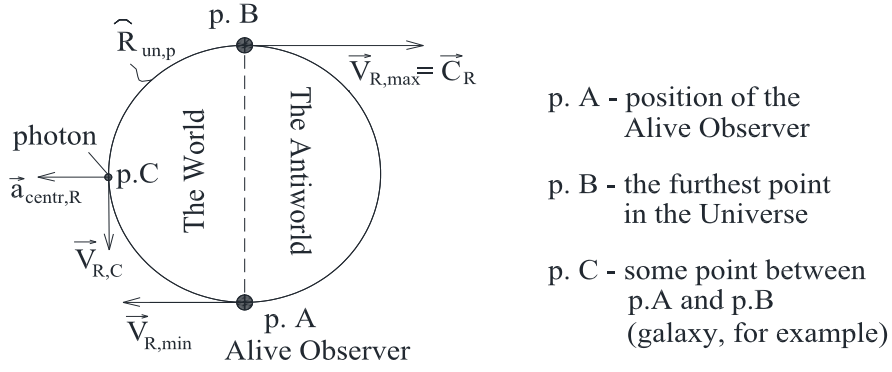

Fig. 1

Where,

$$A_{e,p} = \frac{e^2}{G \times M_p \times m_e} = 2.27 \times 10^{39}$$

$$\sqrt{A_{e,p}} = 4.76 \times 10^{19}, \quad \sqrt{\sqrt{A_{e,p}}} = 6.89 \times 10^9$$

$$\widehat{R}_{un,p} = 0.654 \times 10^{28} \text{ cm}$$

$$\overline{R}_{un,p} = \frac{\widehat{R}_{un,p}}{\pi/2} = 0.416 \times 10^{28} \text{ cm}$$

$$V_{R,\min} = \frac{C_R}{\sqrt{A_{e,p}}} = \frac{2.99 \times 10^{10}}{4.76 \times 10^{19}} = 0.628 \times 10^{-9} \text{ cm/s} - \text{minimum spatial speed}$$

$$C_R = 2.99 \times 10^{10} \text{ cm/s} - \text{maximum spatial speed}$$

$$\widehat{T}_{un,p} = \frac{\widehat{R}_{un,p}}{C_R} = 2.18 \times 10^{17} \text{ s} = 6.9 \text{ billion yrs.}$$

$$2 \times \widehat{T}_{un,p} = 13.82 \text{ billion yrs.}, \text{ the "light- age" of the universe}$$

$$\overline{T}_{un,p} = \frac{\widehat{T}_{un,p}}{\pi/2} = 4.395 \text{ billion yrs.} - \text{the "geological age" of the universe}$$

$$a_{centr,R} = a_{o,p} = 1.374 \times 10^{-7} \text{ cm/s}^2$$

Or,

$$a_{centr,R} = \frac{\widehat{R}_{un,p}}{\widehat{T}_{un,p}^2} = \frac{0.654 \times 10^{28}}{(2.18 \times 10^{17})^2} = 1.374 \times 10^{-7} \text{ cm/s}^2$$

$$\bar{a}_{centr,R} = \bar{a}_{o,p} = \frac{\hat{a}_{o,p}}{\pi/2} = 8.746 \times 10^{-8} \text{ cm} / \text{s}^2$$

$\bar{a}_{centr,R}$ is observed (measured) by astronomers.

Time is connected to the space mathematically by the value of the speed V_R . Therefore, in the formulae and theoretical schemes *Time* must be curved too. *Absolute Time of the Universe* represents curved, closed, contour (manifold). See Figure 2.

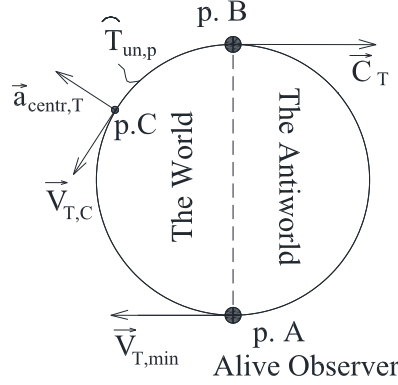

Fig. 2

Where,

$\vec{V}_{T,min}$ - minimum time-speed, s/s

\vec{C}_T - maximum time-speed, s/s

$\bar{a}_{centr,T}$ - quantum time acceleration, s/s²

$$C_T = \frac{T_{un,p}}{T_{un,p}} = 1 \text{ s} / \text{s}, \text{ year} / \text{year}$$

Note: The value of C_T depend on the chosen arbitrary “caliber” of time. This value is always 1.

The natural time-caliber must be the “time-caliber” of the Alive Observer – 1 year. See below. For more precise calculations, however, we could use the accepted arbitrary by our civilization “time-caliber = 1 sec.”. One second is approx. the pulse of our heart.

$$V_{T,min} = \frac{C_T}{\sqrt{\sqrt{A_{e,p}}}} = \frac{1}{6.89 \times 10^9} = \dots \times 10^{-10}, \text{ s} / \text{s}$$

$$\hat{a}_{centr,T} = \frac{\hat{T}_{un,p}}{\hat{T}_{un,p}^2} = \frac{2.18 \times 10^{17}}{(2.18 \times 10^{17})^2} = 0.459 \times 10^{-17} \text{ s} / \text{s}^2$$

Some physical cosmic effects due to these quantum constants:

- a) red shift in the spectra of light photons coming from distant galaxies,
- b) "acceleration of the expansion of the universe". See Figure 3.

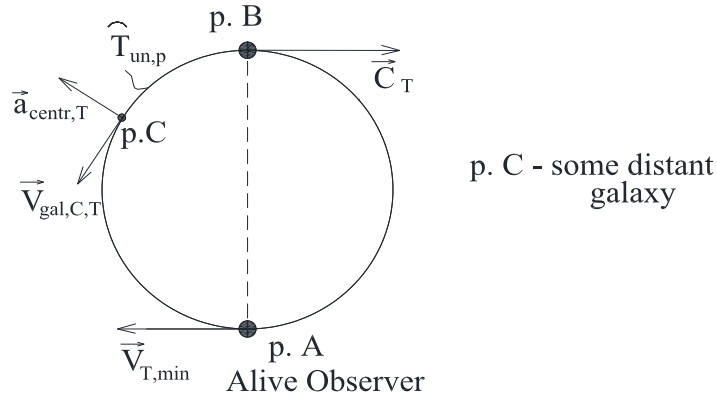

Fig. 3

$$V_{gal.C,T} = V_{gal.C,T,o} + a_{centr,T} \times T_{gal.C} \approx a_{centr,T} \times T_{gal.C}$$

$$V_{gal.C,T,o} = 0, \text{ no motion, no expansion of the Time.}$$

$V_{gal.C,T}$ is just quantum effect. The expansion of the universe is just an illusion - misunderstanding based on wrong interpretation of the real effect of the red shift in the spectra of photons coming from far distant cosmic objects. The spectra of these photons is 'tricked' by the world constant acceleration $a_{centr,T}$.

The 'electron matter' continuum represents the space around 'proton matter' objects. See Figure 4.

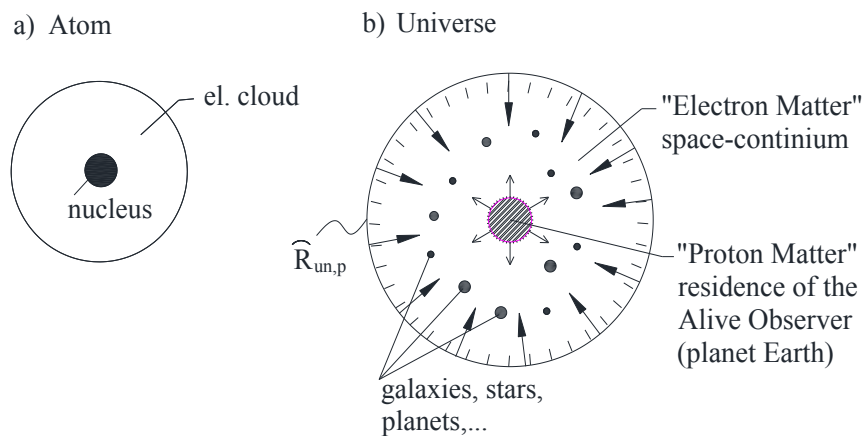

Fig. 4

Inanimate Universe and its counterpart *Animate Universe* are the two elements of the unit – **UNIQUE REALITY!** Both elements of the **UNIQUE REALITY** are in perpetual fraternity (cooperation) and in perpetual fighting (contradiction). They determine each other and cannot exist separately!

The ‘elementary brick’ of the *Animate Matter* – the *Living Cell* – is composed by ‘bio-space’ (protoplasm) and ‘intelligent nucleus’. The same is valid for the biggest ‘animate matter’ object – the *Universe of Life (the Animate Universe)*. See Figure 5.

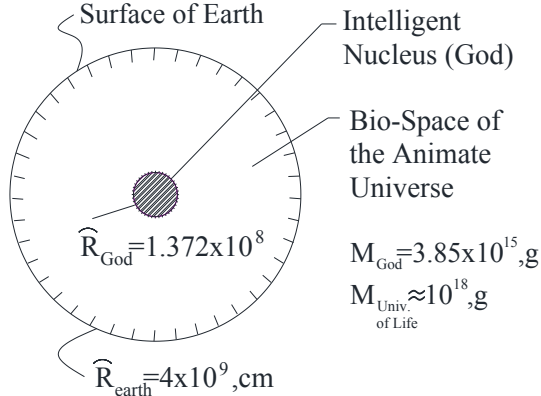

Fig. 5

The ‘Intelligent Nucleus’ of the *Universe of Life* has double nature too:

- 2-D continuum (God – the Super-Mind of the universe). Just ONE!
- Composite image of the individual human spirits (souls) that had lived, live now, and will live during the whole time of existing of the Human Civilization – about 6,000 years. These are souls of civilized people and their compact communities.

Beside His ‘human soul’s body’ God possesses His Unique in the World special kind of spirit – The Spirit of God! Individual elements of ‘Intellectual Nucleus’ of Animate Universe – human beings – possess their own kind of spirit (human soul), which is qualitatively much inferior to the Spirit of God!

In the Unique 2-D Continuum of God individual spirits (souls) of all civilized human beings are dissolved – they lose their individuality. Big accumulated quantity of human souls brings to life new superior quality – the Unique Spirit of God!!! We, civilized human beings, are individuals with simple kind of spirit – human soul, and, at the same time, we are God Himself! God is in everybody of us!!! Our souls are little sparks of the God’s Spirit!!!

See Figure 6.

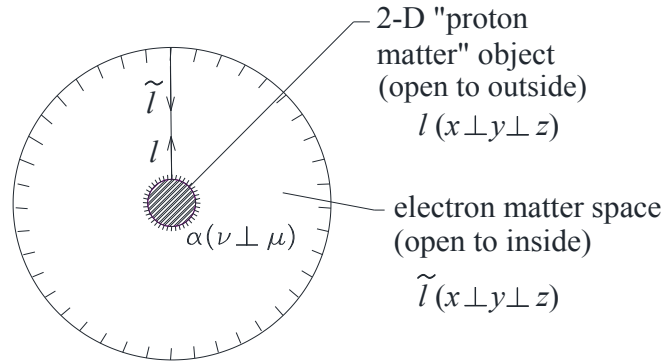

Fig. 8

‘Electron matter’ space ‘ l ’ is orthogonal to the 2-D surface or the Unique Quantum Continuum of the Animate Universe. ‘ l ’ is the space of existing of all individual elements of this universe. And because there are no distinguished points on this 2-D ‘proton matter’ surface-manifold ‘ α ’, the space of existing of the world of individual things is 3-D unit! Do you understand why our visible world is 3-D unit? And why we see (perceive) all three spatial dimensions of ‘ l ’.

‘ l ’ and ‘ l -tilde’ are opposite in direction. Electron (one of the two elementary objects of the Inanimate Universe) is anti-element to the other elementary object – the proton ($e^- \longleftrightarrow p^+$). Individual electrons exist in the orthogonal - to the “electron matter space-continuum” – 1-D spatial dimension ‘ l ’. And, this dimension is opposite to the 1-D dimension of existing of individual “proton matter” bodies ‘ l ’. See Figure 9.

$$T_{God}^2 = \frac{\widehat{R}_{God}}{\widehat{a}_{o,p}} = \frac{1.372 \times 10^8}{1.374 \times 10^{-7}} \approx 10^{15}, s^2$$

$$T_{God} = 3.163 \times 10^7 s = 1 yr.$$

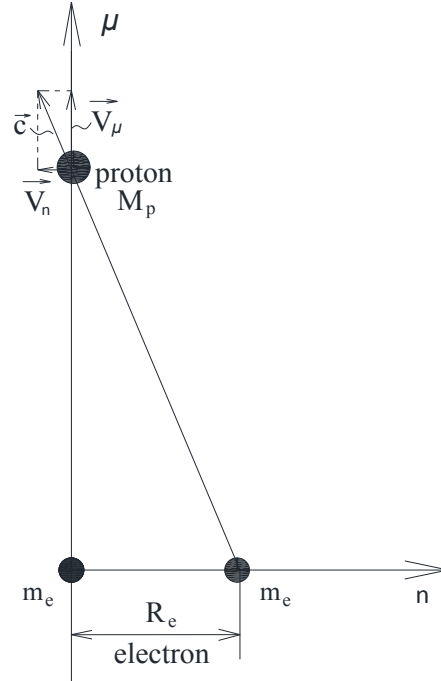

Fig. 9

Therefore, the 'time-caliber' of God is 1 (one) year! One year is the time of full rotation of the God's residence (the planet Earth) around its center.

On another hand,

$$\frac{R_{un,p}}{T_{un,p}^2} = \frac{R_{God}}{T_{God}^2} = a_{o,p} = 1.374 \times 10^{-7} \text{ cm} / \text{s}^2$$

$$\frac{R_{un,p}}{R_{God}} = \frac{T_{un,p}^2}{T_{God}^2}; \quad \frac{R_{un,p}}{R_{God}} = \sqrt{A_{e,p}}$$

Hence,

$$\frac{T_{un,p}}{T_{God}} = \sqrt[4]{A_{e,p}},$$

$$T_{God} = \frac{T_{un,p}}{\sqrt[4]{A_{e,p}}} = \frac{2.18 \times 10^{17}}{6.89 \times 10^9} = 3.164 \times 10^7, s = 1 \text{ year!}$$

On Figure 10 is shown the scheme of the God's Residence.

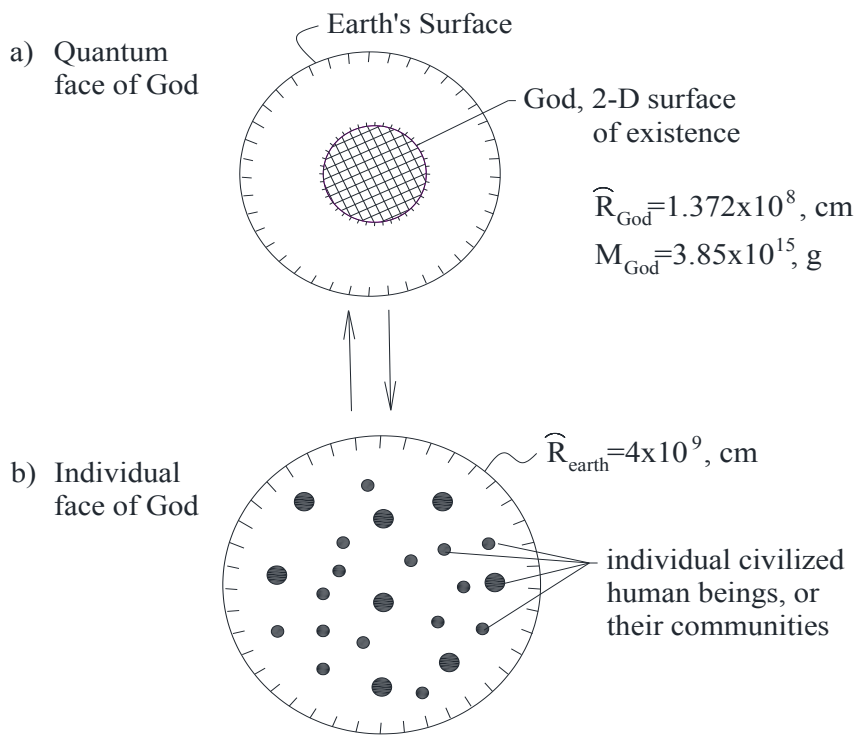

Fig. 10

Time is connected with the space through the speed \vec{V}_R . Hence, it is curved and closed contour (manifold) too. See Figure 11.

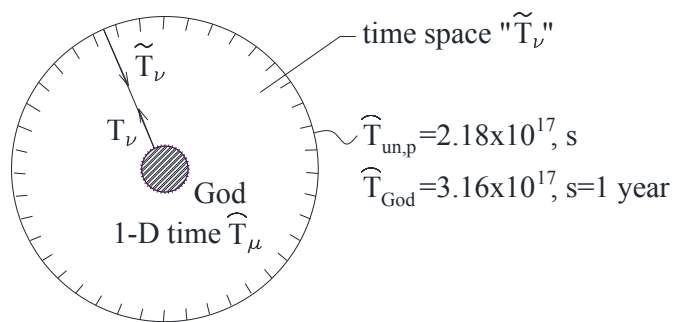

Fig. 11

\widehat{T}_μ is 1-D (one-dimensional) closed contour (manifold) of God;

$$\widehat{T}_\mu = 1 \text{ year} = 3.16 \times 10^7, \text{ s}$$

$T_\nu \perp T_\mu$, they are mutually orthogonal.

Space of Life I encompasses everything alive on our planet. It is **continuum** in which are immersed all individual living things! *Time of Life* T_v is a **continuum** too. All individual living things exist in this Time-continuum. Only the most intelligent living things – civilized human beings – follow strictly the time-standards of the *Quantum Wave of Life Evolution*. All other living things are just ‘living background’ of this most intelligent nucleus of life. Their life doesn’t need to be calibrated strictly by quantum standards of the ‘universe of life’.

Quantum Evolution of Life in *Absolute Time* of all quantum communities of living things follows direction of \tilde{T}_v , while the evolution of individual living things follows the opposite direction of *Time* T_v . See Figure 12.

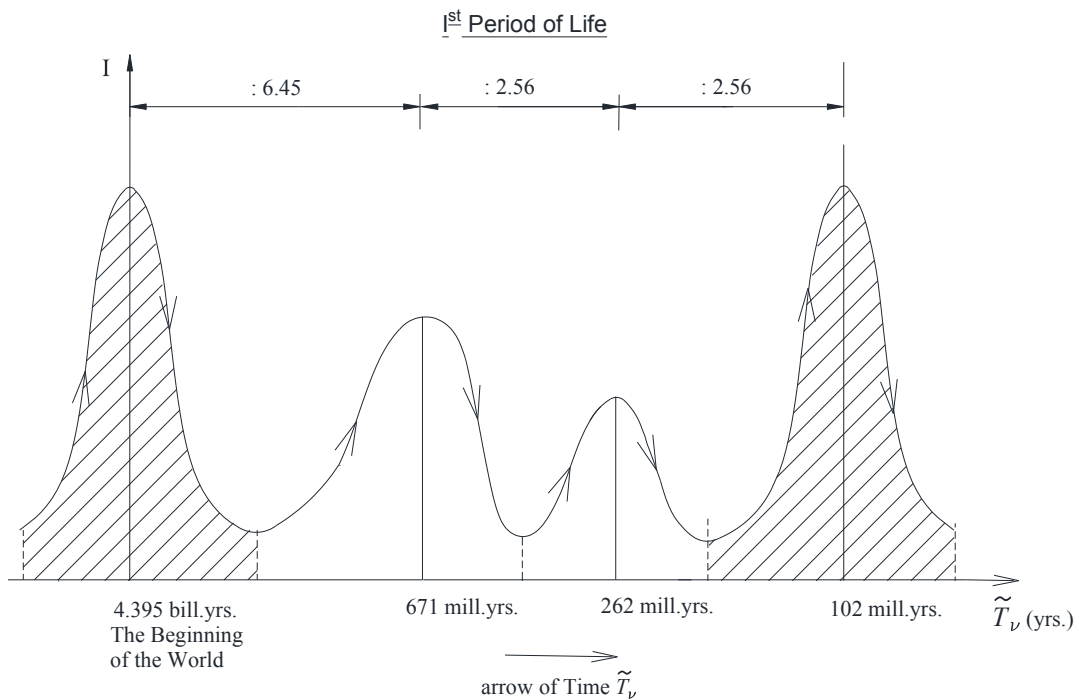

Fig. 12

Time \tilde{T}_v is a continuum, like ‘time-space’ in which exist all individual living things on our planet. This absolute time-continuum has 6 quantum time-zones according to the Quantum Wave of Evolution of Life. These quantum time-zones are ‘open to inside’. Individual living things develop their life in the opposite direction of time – T_v . The most intelligent zone is the quantum time-zone of the Civilized Human Beings – its duration is about 6,000 years. God is the spiritual continuum of this most intelligent zone. In less intelligent form God (His unique soul is rarified) exists in all other 5 quantum time-zones. Individual human souls are emerged in the quantum zone VI. Their closed loop times of existence (continuum) are ‘open to outside’. In the Time-Universe of individual things civilized human beings feel the orthogonal time T_v . And again: individual evolution of

civilized people happens in the opposite direction of the Absolute Time-Continuum which we perceive as Real Time in our universe of individual things. See Figures 13.

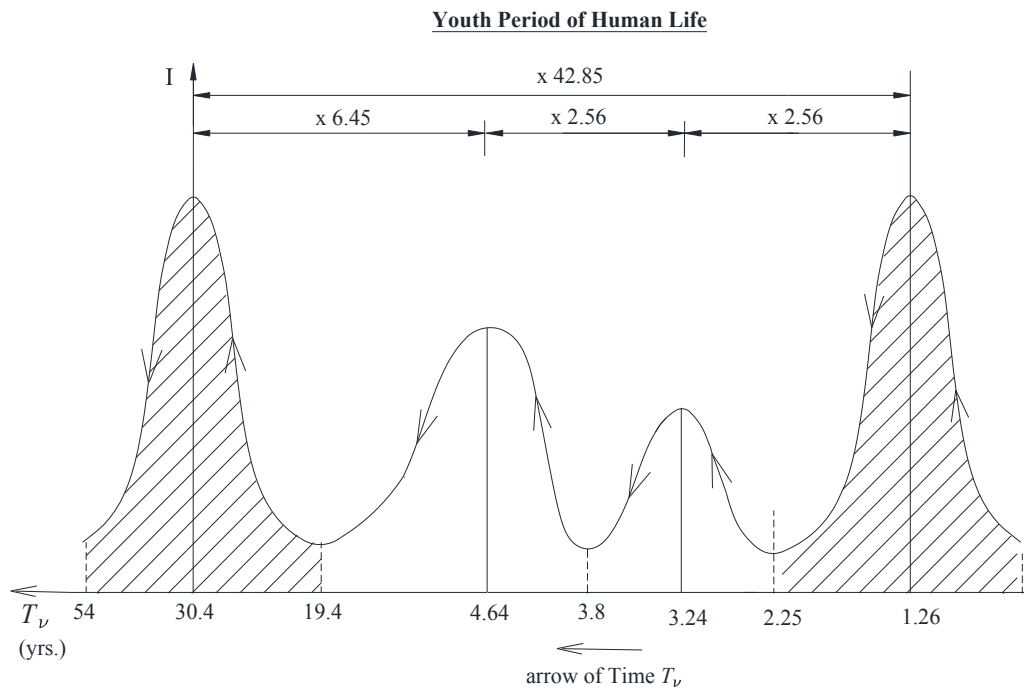

Fig. 13

As was mentioned above, ONLY the life of individual civilized man coincides absolutely with this great quantum chain of *Time!*

Where,

T_v - time of evolution (existence) of individual civilized human beings,

\tilde{T}_v - time of evolution of the whole Animate Matter (all living creatures on planet earth).

The 'electron matter' space of individual things "I" is a 3-D unit. See Figure 14.

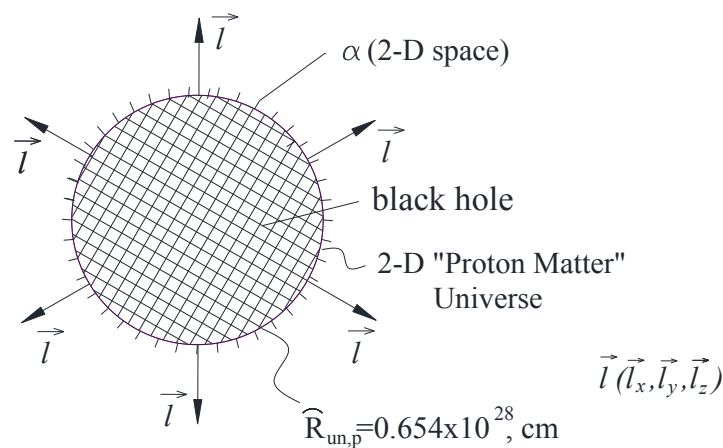

Fig. 14

On Figure 15 is shown the scheme of *Time of Evolution* for God (2-D spirit-continuum) and *Time of Evolution* of individual civilized human beings. The Superior Spirit of God exists in the 2-D *Quant Time-Manifold* $\overset{\circ}{T}_{God}$. As quantum time, $\overset{\circ}{T}_{God}$ possesses no distinguished time-points on its 2-D surface. The time of evolution of individual civilized human beings can starts at any point on this 2-D time-surface. Both times are mutually orthogonal. Individual civilized human being cannot see, in principal, the ‘face of God’! However, individual civilized human being ‘feels God’ because God is the common, combined, image of all civilized human beings! Actually, all living things on our planet feel and are influenced by God!

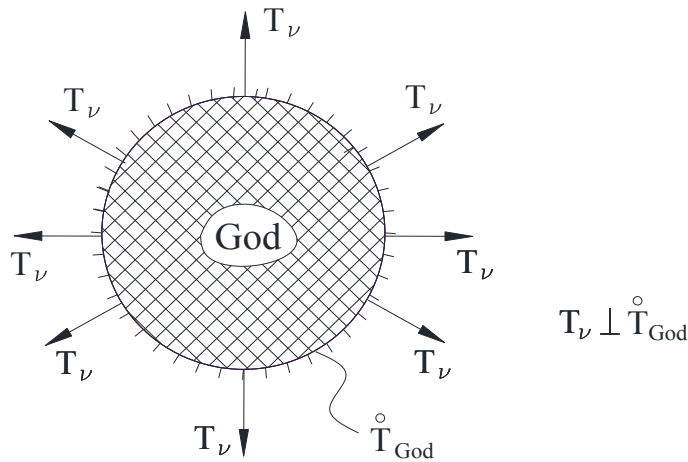

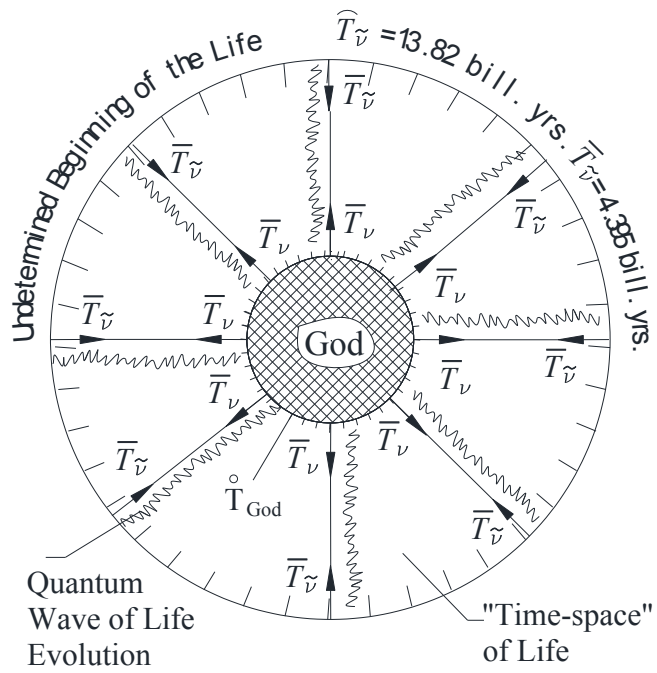

Fig. 15

On the time-line T_ν are projected two different, independent each from another, dimensions of time: \bar{T}_ν and \tilde{T}_ν . \tilde{T}_ν is the time of evolution of all living things on our planet, while \bar{T}_ν is the time of evolution of individual living things. See Figure 16.

We, civilized human beings, perceive directly only our individual time which direction coincides with \bar{T}_ν . The rest of the Universe of Life is perceived by individual civilized human beings as ‘time-background’ \tilde{T}_ν . This ‘time-background’ includes all ‘artifacts’ of Life which we see around us: skeletons, fossilized remains of living things, tools made by primitive humans, constructions built by ancient people, etc.

Individual things in the Inanimate Universe (including our material sensors) exist in the 3-D space $l(l_x \perp l_y \perp l_z)$. They cannot perceive directly the common quantum image of the Inanimate Universe (\hat{T}_ν). Because, it is orthogonal to the world of individual things. But they feel it and are influenced by it. They feel this hidden, invisible for them, quantum 2-D manifold, through the gravitation and ‘background temperature’ of the universe $t_{un,p} = 2.74 \text{ }^\circ K$. See Figure 17.

$\overset{\circ}{T}_{\text{God}}$ - Undetermined
 End of Life
 \widehat{T}_{ν} - open to inside
 \bar{T}_{ν} - open to outside

Fig. 16

Inanimate Universe

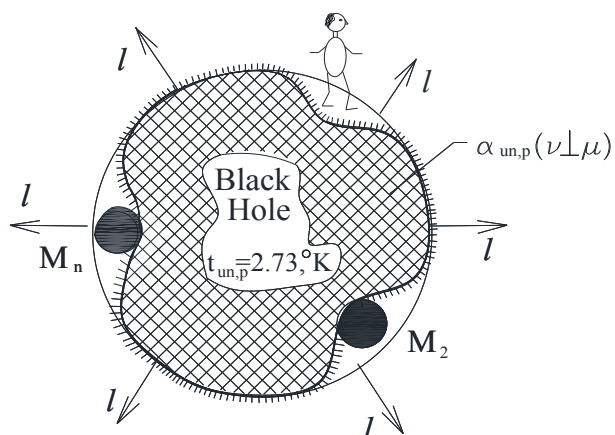

Fig. 17

Proton and its derivatives – the hadrons, have three quantum time-images in the 3-D space of existing of individual ‘proton matter’ substance – three quarks.

The God’s Spirit exists in the quantum 2-D time-surface $\overset{\circ}{T}_{God}$. See Figure 18.

Human Civilization - God

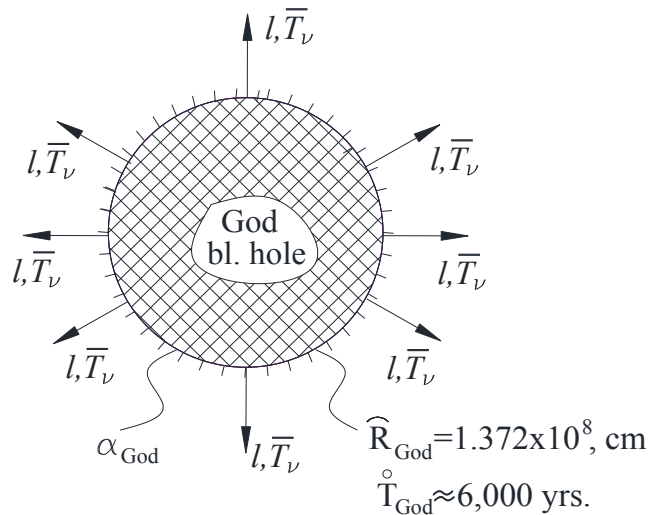

Fig. 18

Individual human souls live in 3-D space l . Time-surface $\overset{\circ}{T}_{God}$ is the beginning and the end of the human soul’s life. They are dissolved (lost their individuality) in God’s time- and space-continuum before their birth and after their death. God is the second, common, image of every civilized human being!!! We are kids of God!!!

According to the Christian Religion, the three images of God are: God-Father, God-Holy Spirit, and God-Jesus Christ. The idea of Holy Trinity was first introduced in the Christian doctrine in the fourth century A.D. by religious scholars of emperor Constantine the Great. This great idea was inspired to the founders of modern Christian religion by God Himself! God-Father is the 2-D ‘human souls body’ – continuum of the Unique God, God-Holy Spirit is the superior soul (spirit) of the Unique God. Jesus Christ is the projection (presentation) of the Unique God in the World of individual human beings.

The most basic ‘trinity symmetry’ in the world is the composition of the *Reality*. Three are major elements of *Reality*: Inanimate Matter, Animate Matter, and the Spirit. In the frame of the triplet (Trinity) inanimate and animate matter form a ‘doublet’ – both categories are different from each other, but they have common root – they are matter. The ‘singlet’ – ‘Spirit’ is very different in quality element of *Reality*.

The “trinity” organization of the world is presented in any 2-D material object. Hadrons are derivatives of the elementary building block of the ‘proton matter’ – the proton. Their internal (quantum) structure is ‘trinity’ – they have three different unseparated each

from another images: 3 quarks. On higher level of accumulation of mass hadrons form triplets. See Figure 19.

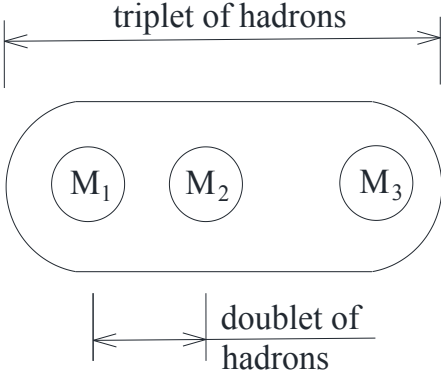

Fig. 19

M₁ and **M₂** form doublet with close masses but different electrical charges, **M₃** has mass different, but not much, from the average mass of the doublet. Mesons are presented by 2 independent, unseparated each from another, images – 2 quarks. They are not naturally existing particles. Finally, they decay very fast after their creation into ‘non-proton’ material particles. See GQM.

In the universe of life we observe also this ‘trinity organization’. Family, for example. Mom and Dad are doublet, kid (or kids) is a singlet. See Figure 20.

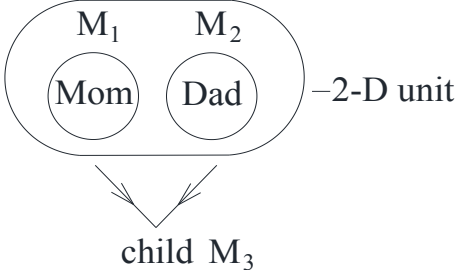

Fig. 20

The basic, most important in the world, ‘trinity organization’ is the internal organization of the Super Mind of the Universe – God. See Figure 21.

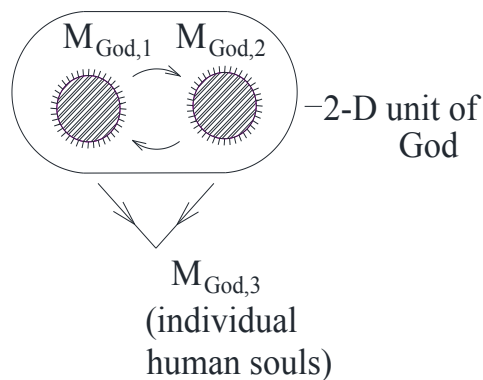

Fig. 21

Where,

$M_{\text{God},1}$ is the 'human soul continuum' of God. His spiritual body.

$M_{\text{God},2}$ is His superior spirit

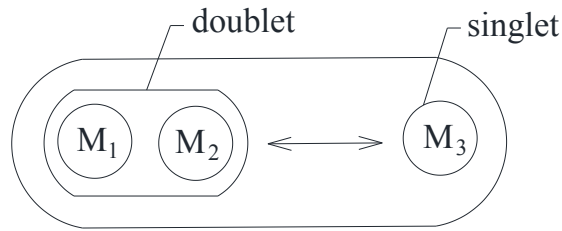

$M_{\text{God},3}$ (the singlet) is all human souls on earth from all duration of existing of the Human Civilization (about 6,000 years). Kids of God in the world of individual things.

In the Inanimate Universe of individual things sometimes 'nova', or 'super-nova' stars, or 'super- nova quasars' explode violently. One 'super-nova' star can emit energy equal to a whole big galaxy or cluster of galaxies. In these super-nova stars the composite 2-D face of the Inanimate Universe is presented (temporarily) in big scale (big power). The same happens in the Animate Universe. God's Spirit can explode Himself in some civilized human beings in very big scale. Those chosen by God people are the great prophets of God!!! Those 'super-nova' people possess a lot of stuff of the God's Unique Spirit! Such 'super-nova' human beings can be called "great prophets of God". Maybe Jesus Christ was such great prophet? Great prophets appear in our Human Civilization only in some quantum moments-knots in Evolution of Life. According to the Quantum Wave of Evolution of Civilized Man (see GQM VI), sometimes around 2020 A.D. new great prophet will start to teach the Final Word of God! This great prophet will be regular human being to whom God will reveal the final truths about our world!!! The spirit of this super-intelligent man will change in cardinal way our world view and the quality of our civilization. New fundamental science will replace the old mathematical official science. New quantum technologies will be created. This great event will be "The Second Coming of the Messiah?"

Regular people cannot see (perceive) directly the image of God because they (humans and God) live in two mutually orthogonal dimensions of space and time. And, because God is a pure spirit. We cannot perceive Him with our material senses. However, regular people can feel God's presence in the World through their intuition, through God's universal protection (the Anthropic Principal), and God's universal love. Because of these facts, major world religions are so long-living, so persisting. No matter that they are so

primitive and cooked by religious scholars. The last great prophet of God will teach the Final Science of God! On Figure 22 is shown 'triplet organization' of the *Reality*.

Triplet of Reality

M₁ - inanimate matter
M₂ - animate matter
M₃ - spirit

Fig. 22

The egg (ovum) is the elementary brick of the human bio-organism. When egg cell (from woman) and sperm cell (from man) fuse, a diploid cell (the zygote) is formed, which gradually grows into new human organism. Hence, the zygote is the beginning of the human life. See Figure 23.

Human Being

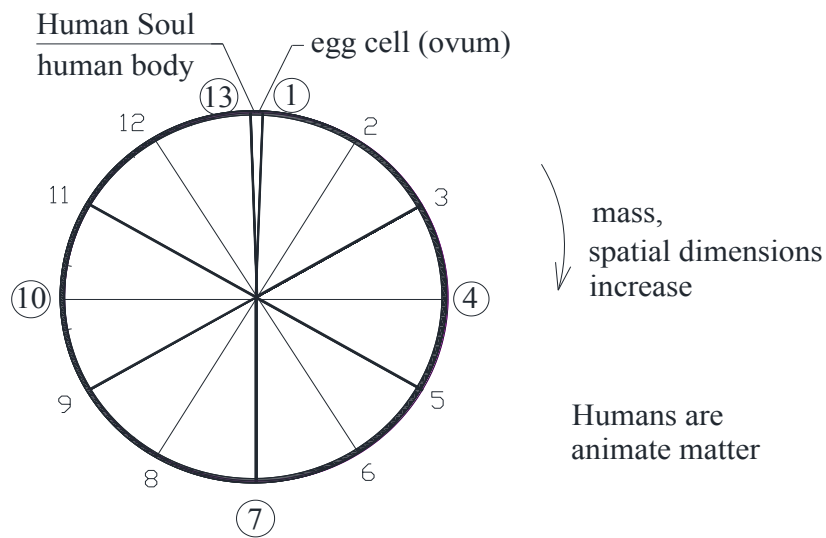

Fig. 23

On Figure 24 is shown quantum evolution of Reality leading to the highest level in its qualitative evolution.

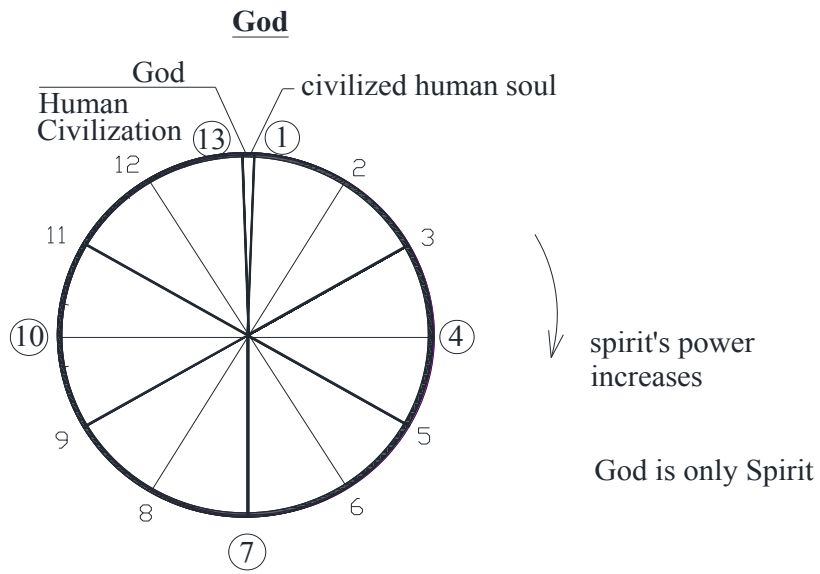

Fig. 24

As was mentioned before in this article, there exist 6 major forms of *Reality*. See Figure 25.

Qualitative Evolution of Reality

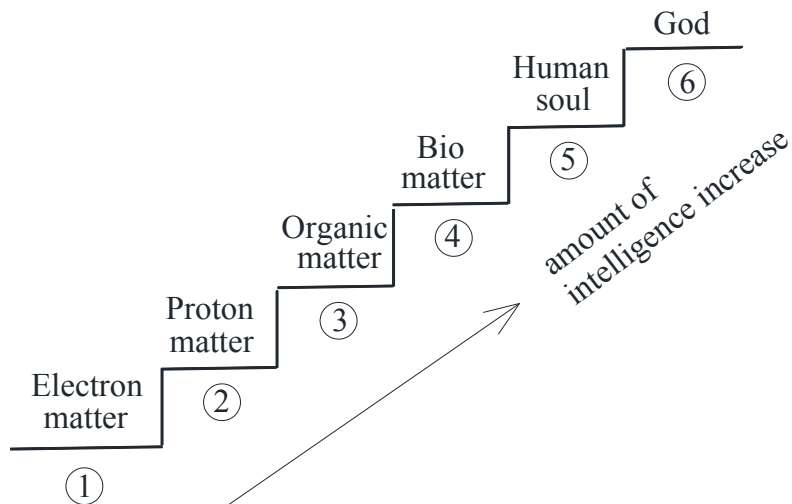

Fig. 25

Every new, more advanced in quality quantum form of *Reality*, is composed by body which belongs to the previous in quality form of *Reality*, and by 'intelligent nucleus' which

belongs to the next in quality form of *Reality*. For example, human body belongs to the fourth form of *Reality*, while the human brains harbor the new, fifth, form of *Reality* – human soul. However, building material of the human brains still belongs to the fourth form of *Reality*. In the human brains happens mysterious transformation from ‘animate matter reality’ to the higher form of *Reality* – Human Spirit! If human brains are dead – the human soul is dead too.

Below are shown some basic schemes of the extreme elements of inanimate and animate universes. Figure 26 shows the schemes of the smallest and biggest objects in the Inanimate Universe.

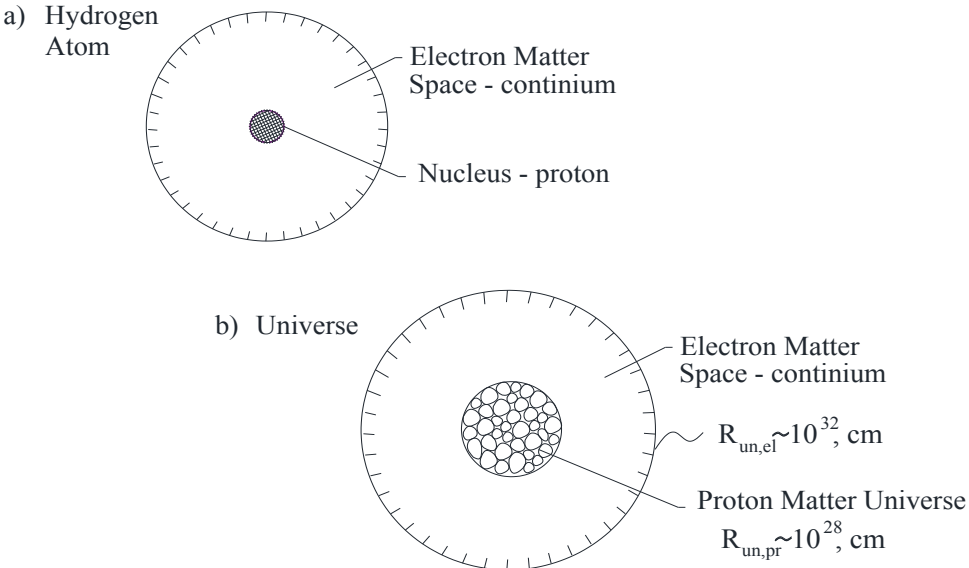

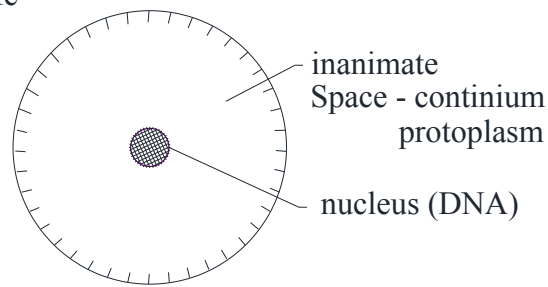

Fig. 26

Figure 27 shows the schemes of the smallest and the biggest objects in the Animate Universe.

a) Bio-cell - quantum
min life

b) Universe of Life -
max life

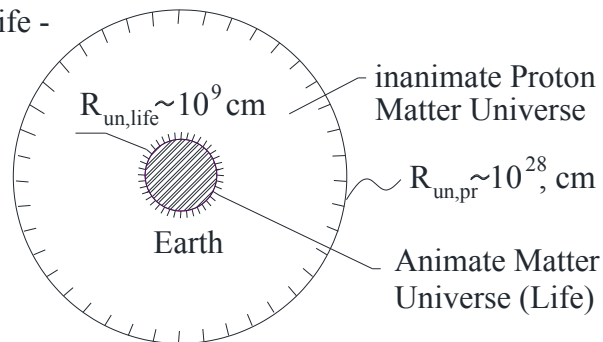

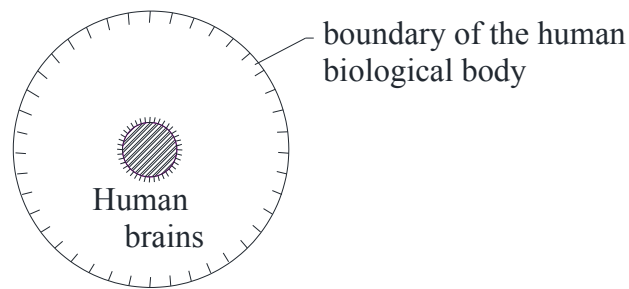

Fig. 27

As we know already, every material, or spiritual, object in our unique world possesses two images. The human image (presentation) in the world of individual things is composed by the elements in the human body (cells, tissues, organs, the whole bio-body). These are quantum elements which belong to the fourth form of *Reality* – the animate alive matter. As we know, life starts on the quantum level of the bio-cell. Human brains are the “intelligent nucleus” where new quality of *Reality* appears – the human spirit (soul). See Figure 28.

a) Human being in the 3-D world of individual things "l"

b) Human being's quantum image

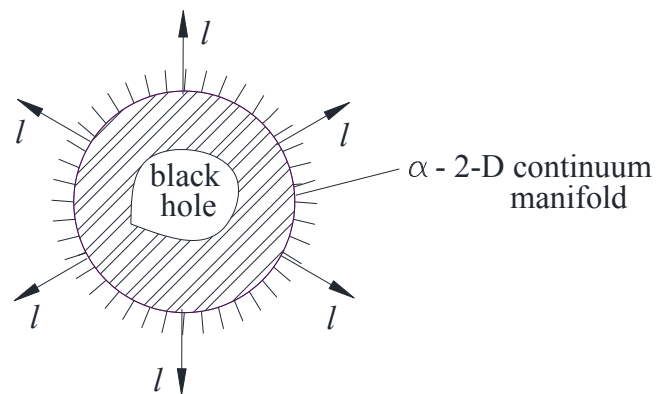

Fig. 28

The second (human being's quantum image is shown on Figure 28, b. It represents 2-D continuum-manifold. This is the spirit (soul) of the human being. The human soul resides the 2-D surface " α " which is orthogonal to the 3-D space of existing of the individual elements of the human bio-body. And because all points on the 2-D quantum surface " α " are equal (not distinguishable each from another), the human spirit (soul) coincides (is in contact) with all elements of the human bio-body. All bio-elements of the human body are influenced (controlled) without the help of any material carriers (physical, chemical reactions, electrical currents). And this control is immediate (instantly)– not limited by the speed of light! If some wish appears in the human consciousness (human soul), this wish is transferred instantly to the particular bio-element of the human body. Official science is unable to explain this phenomenon. How some wish of the soul ('consciousness' called scientifically) can trigger some material process in the human body? If the human soul is not a material substance, then how non-material substance can make material substance to move in the space or to do some changes in the material body? It is real mystery for contemporary official fundamental science. It is right time now to throw this old science on the cemetery of failed scientific dogmas and theories.

Now we could understand another ‘mystery’ of quantum interaction between bio-material body and the human soul. Medicines which doctors give us don’t heal our illnesses. They just trigger the resistance of our immune system. The soul is the main healing factor in our bio-organism. The soul gives signals (orders) to the material bio-elements in our body for healing of the sick organ. There exist some alternative methods of healing which are not accepted as real (working) by conventional medicine. But they work. Like ‘homeopathy’. Or like healing with the help of some crystals attached to the human body. Those alternative methods of healing work only if the patient believes in their efficiency. Scientists have conducted some experiments when the patient is told (wrongly) that some absolutely not medical substance (some powder of calcium, for example) will heal him. And he is healed. Why? Because the soul of patient ‘believes’ that this substance works and it gives signals to the biological body to repair itself. People must BELIEVE and WISH to be healed. Without that, they cannot help their material bodies to overcome the illness. People who lost the wish to live, die soon.

Let consider now the extreme, superior, quantum object in the qualitative evolution of *Reality* - God.

Life on Earth is Unique. There is no other spot (planet or other kind of cosmic body) in the whole universe with life on it. Because there is only one “intelligent nucleus” in the Inanimate Universe that ‘observes, measures, determines, and control’ the inanimate body of this ‘unreasonable’ material mass. God – the Super-Mind of the Universe is unique too. Because there is only one center of control (intelligent nucleus) in the body of the universe of life (the animate universe). We already have considered the quantum image of God in this article (see Figure 16). God occupies the orthogonal (to the 3-D space I of existing of individual things in our world) 2-D space-manifold “ α ”. His superior spirit is in touch with every material object in the world (alive, or non-alive, or spirit), in every spot of space of the whole universe, and at any moment of *Time*. Such a way, God influences and controls all forms of *Reality* in our world.

All individual things from 3-D space I are projected on the orthogonal 2-D space manifold of God “ α ”. In geometry that means in point, with zero space and with zero substance in this point. Not in the real quantum world, however! This ‘point’ is super-concentrated spot containing all information about all individual things in the universe, and for all the time of existing of the universe. On the 2-D quantum surface “ α ” all points are equal, indistinguishable each from another. And vice versa – God’s Spirit is projected in all individual things in the universe (material or spiritual).

Important question arises: does exist an “intelligent nucleus” (some kind of God’s brains) in the universe? And, what is it? And, where in the universe is it located? Yes, there exists such “super-intelligent nucleus” and this nucleus are the combined individual souls of all civilized human beings from all periods of time of existing of the Human Civilization (about 6,000 years). All 75 billion human souls! Every individual human soul represents a little quantum cell in the “God’s brains”. See Figure 29.

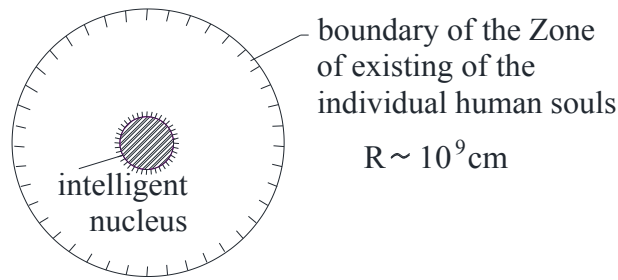

Fig. 29

This 'intelligent nucleus' (God's brains) must be built by the same material of the previous form of *Reality* – individual human souls. Does the God's brains appear in the final stage of evolution of the Human Civilization when the amount of the living human souls reaches its maximum – 7-8 billion people. Are God's brains some very big, compact, and very advanced in its evolution human community? I don't know that for sure.

What about the rest of living creatures on our planet? What is their role in the quantum structure of the universe of life? They represent something as "life background" in the quantum structure of the universe of life (on our planet). More advanced in evolution animals (mammals, for example) possess something like soul but this soul is very inferior in intelligence compared with the human soul. Their souls cannot reach the quantum level where quantum qualitative transformation from lower level spirit (spirit connected with material body) to the highest, superior, level of the Unique Spirit of God happens! Yes, God is 'Human God', not dog's god or something like that. Our human souls are His spiritual body. But God influences also (controls) all living creatures in the animate universe (our planet) and all material objects in the whole inanimate universe!

In Genesis 1:26 God said: "Let us make man in our image, in our likeness". God formed the first man Adam from the dust and gave him life by sharing His own breath. According Bible Humanity is unique among all God's creations having both animate material body and an immaterial spirit (soul). This claim of Bible is right in some aspect.

"God is the most important thing in our world. He is located on the very top of the pyramid of **Universal Unique Reality!!!** That means that the science of God is the most important science in the World – the "Top Science"! The discovery (understanding) of the real nature of God will be the greatest achievement in science! The final truth to be discovered in our unique world. When Human Civilization will reach its Everest in science, culture, technology, and in understanding of Animate Universe and God, it will lose interest in Life and will die soon after short period of enjoying of this final perfection! Humans, the End of the World is close (around 2068 A.D.)! After the End, our world-universe will resurrect from its death like the legendary Phoenix Bird in its Undetermined Beginning. "Le Roi est mort. Vive le Roi!".

Now about the power of prayer. All humans, religious or not, more or less pray God. Believe in Him or not. Prayer places us with contact with the Super-Mind of the Universe

(God), and we expect God to answer positively for us our prayers. Religious people think that God chooses to grant our petitions or deny our requests. It depends on how much we believe in God or how honest are our requests.

When people pray God they admit (without any proof) as indisputable fact that they have deal with some super-intelligent creature, similar to them in the way of understanding of the environment in which we live, of human feelings, human moral, etc. Something like Superman possessing incredible powers over the world. So, they communicate with Him as man with man (Superman). It's not the case, dear people! God is spirit totally different in quality and powers than regular human spirits. Humans cannot expect Him the same understanding about the world, the same feelings, the same compassion about sick and unhappy, etc. God is a Supreme Father of the World and He cares about the world in general. He cannot hear you, He cannot answer your individual prayers! God has His job to do in our world: He is a Supreme Guardian of Life and its evolution according to the great Quantum Wave of Life Evolution!

Can the reason (soul) of a bio-cell in the human organism reach the spirit of your body (the human soul) and 'ask' for some privilege for itself? And what language this little cell can use to explain to the human soul what it wants? There is no direct communication at all between the bio-cell and the human soul! This little cell could die and the human soul will not notice it. However, the human soul will notice for sure some health problem in big assembly of bio-cells. For example, if your kidney (bio-organ) gives signal that it has some health problem, then the human soul will for sure notice it and will answer somehow this complain. Prayer is just for your self-comforting. Nothing to do with God. But collective prayer of big enough assembly of human souls (in our time more than 7 billion human souls live together on our planet) could possibly reach the God's ear? Maybe?

Note: Because of technical problems, this important article (written in Bulgaria, 2016) was ready for posting in Chukanov's site www.chukanovenergy.com/articles/ one year after its composition.
